PROFESSIONAL SUMMARY

Data Analyst with a B.Sc. in Mathematics and hands-on experience in Power BI, SQL, Python, and Excel. I transform raw data into actionable insights through data cleaning, analysis, modeling, DAX, and interactive dashboards. My projects include a 2,800+ listing smartphone market analysis and a supplier risk model for restaurant inventory management, demonstrating end-to-end analytical problem-solving.

TECHNICAL SKILLS

SQL: PostgreSQL, Joins, CTEs, Window Functions, Subqueries

Python: Pandas, NumPy, Matplotlib, Seaborn, Web Scraping

Power BI: DAX, Power Query, Data Modeling, Interactive Dashboards

Excel: Data Cleaning, Analysis, Reporting

Analytics: EDA, Statistical Analysis, KPI Tracking, Feature Engineering, Business Reporting

DATA ANALYTICS PROJECTS (EXPERIENCE)

Nigerian Smartphone Market Analysis | Python, Power BI | May 2026

- **Analyzed 2,800+ Jumia smartphone listings** by scraping, cleaning, and standardizing product data with python and pandas, creating a structured dataset for market analysis.
- **Improved product level analysis** by engineering RAM, storage, OS, color, screen size, pricing, rating, and review attributes for consistent comparison across listings.
- **Improved product ranking reliability** by developing a DAX based Credibility Score that combines with review volume rather than relying on star ratings alone
- **Enable faster market exploration** by building a 3-page Power BI dashboard covering market overview, brand performance, and product level analysis with interactive filters and product link navigation

Restaurant Inventory Intelligence Dashboard | Power BI | August 2026

- **Evaluated inventory performance across 100 days** by analyzing stock value, usage, waste, stock coverage, supplier lead times, and replenishment risk in power BI.
- **Improved replenishment monitoring** by developing DAX measures for Days of Stock Cover, Waste %, and estimated waste value, giving visibility into inventory health.
- **Identified potential stock out risks** by comparing Days of Stock Cover against supplier lead time and classifying items requiring replenishment attention.
- **Supported inventory decision making** by building a 3-page Power BI dashboards Covering Inventory Overview, waste analysis, and supplier/replenishment priorities.

Manufacturing Process Evaluation | SQL (PostgreSQL) March 2026

- Used joins, CTEs, window functions, and subqueries to evaluate manufacturing performance metrics and identify operational bottlenecks.
- Translated query-level findings into process-improvement recommendations for manufacturing stakeholders.

Sales Data Workflow Debugging | Python December-January 2026

- Diagnosed and fixed data-quality issues in a broken sales data workflow through validation, cleaning, and exploratory analysis.

- Improved downstream reporting reliability by resolving root-cause data integrity issues rather than patching symptoms.

HR Analytics & E-commerce Dashboards / *Power BI, DataCamp/Cedars X November 2025*

- Built two additional interactive Power BI dashboards analyzing (1) workforce trends and performance indicators from employee data, and (2) sales, product, and customer trends from e-commerce data both using Power Query transformations and DAX-based KPI reporting.

EDUCATION

B.Sc. in Mathematics — Obafemi Awolowo University, Ile-Ife, Nigeria 2018 – 2024

CERTIFICATIONS

- Data Literacy Professional — DataCamp / Cedars X
- Data Analyst in Power BI — DataCamp / Cedars X
- Associate Data Analyst in SQL — DataCamp / Cedars X
- Associate Data Scientist in Python — DataCamp / Cedars X (In Progress)
